output & print management solutions

Advanced smart output and print management

Solutions for organizations
that want to work efficiently

Holland House is a world leader in output and print management solutions. UniSpool® provides you with maximum efficiency and flexibility in generating, processing, managing, and delivering output – all while helping you to minimize costs.

The functionalities of our flagship product UniSpool® go far beyond the standard capabilities of native operating systems. With UniSpool® linked to your ERP environment, your entire output and print environment is managed independent of location and service, transparently and efficiently.

UNISPOOL®

SAP® Certified
Integration with SAP NetWeaver®

UniSpool® is one of the world's most specialized and powerful output and print management solutions. UniSpool® transmits output to printing equipment, archives output, and offers flexible distribution of documents to end users or other applications.

Continuity
UniSpool® ensures maximum use of your printing environments, giving employees seamless access to the information they need and guaranteeing business continuity.

Reliable and fast
UniSpool® quickly processes huge amounts of data without manual intervention and guarantees reliable, round-the-clock document delivery.

Transparent and flexible
Insight into the status of print requests is available during and after processing by UniSpool® and is fed back to the relevant user and application if possible.

Scalable solutions
Say goodbye to all those different spooler management tools. UniSpool® is a standardized output and print management solution for all Unix/Linux, Solaris, HP-UX, and Windows platforms. Up to 20,000 devices can be managed from a single server.

Modular
UniSpool® is functionally structured around several modules, each designed for a specific task and fully customizable to your needs.

Control over corporate visual identity and distribution
The Automated Distribution module supports all major desktop publishing software programs. Your documents are automatically created according to your corporate visual identity.

Easy-to-use controls
The Advanced Management function provides graphical user interfaces to network administrators and helpdesk staff, so that they can quickly and easily control and monitor the entire printing network.

Safety first
UniSpool® offers maximum protection for printing confidential documents, as all print data processed by UniSpool® can be encrypted. When the requested data has to be stored on a server – temporarily or otherwise – the file is secured with encryption.

Implementation, management, and support
UniSpool® is easy to implement: the solution is very user-friendly and based on the familiar look-and-feel of the underlying operating system. Your employees can quickly start using it – there's no need for expensive training.

Our helpdesk offers round-the-clock support to users if they have any questions or problems. Our employees can then immediately identify and solve the problem from a central control point.
